Project Design Phase-I

Solution Architecture

Date	04 November 2023
Team ID	NM2023TMID11282
Project Name	Electronic voting system

Solution Architecture:

Designing a solution architecture for an electronic voting system using blockchain technology is a complex but promising endeavor. Blockchain can enhance the transparency, security, and integrity of electronic voting systems.

Designing an electronic voting system with blockchain requires a strong focus on security, transparency, and usability. It is essential to involve experts in blockchain technology, cryptography, and election processes to ensure the system's integrity and public trust.
